PIONEERING THE FUTURE OF HYDROGEN DRONES

SKYCORP Technologies is Estonian a dual-use company developing and manufacturing hydrogen drones and related infrastructure for the purpose of multiple long endurance use-cases including, but not limited to **first response, surveillance, inspection and disaster response**.

Presence in Europe:

- European Clean Hydrogen Alliance, Alliance for Zero Emission Aviation, GreenTech Alliance, DroneMajor, Network of EU Law Enforcement Drone Unit
- Member of Estonian Aviation Cluster, Cleantech Association, Maritime Cluster, Hydrogen Valley Estonia, ZeroEST etc
- Advisory board member of Metrosert Centre of Applied Research for Drones (EE)

Main product:

Hydrogen Drone Gen2

- Flight endurance – 90-120 minutes
- Refuel time – 2-5 minutes (off-grid capable)
- MTOW – 24 kg
- Payload capacity – 5 kg
- On-board computing
- Modular design allowing payloads from surveillance and inspection to mine detection and localisation
- Can serve as a flying back-up generator – 2.4kW stable output

Daily workload per drone:

- Inspection/Survey/Mapping - 10-12 km2
- Mine detection – 1 - 1.2 km2
- **Roadmap** – World's first fully autonomous network of hydrogen drones, capable of sustainably scaling towards country-wide coverage

Interest in Ukraine:

Cooperation with **renewable energy & hydrogen, infrastructure owners, aerospace and dual-use** companies towards **energy security, demining and rebuilding.**

Additional collaboration and procurement interests:

- Ukraine made payloads and components (China- free) for ISR, C2C and other ecosystem products including AI/ML functionalities
- R&D/Innovation projects (i.e. Horizon, EDF)
